D4: Daran, Jean Claude et al., "Coupling of 1-(diethylamino) ropyne on dodecacarbonyltriiron and dodecacarbonyltriruthenium", Organometallics, 1984, 3(8), pages 1158-1163

The present application relates to aminocyclopentandienyl ruthenium complexes useful as a catalyst in the racemization of a chiral compound, and the preparation thereof.

D1 discloses aminocyclopentadienyl ruthenium hydride complexes which have cyclopentadienyl ligands accommodating linear amino groups such as C5H4CH2CH2NMe2 or C5H4CH2CH2NMe2, and the protonation of hydrides. D2 discloses diruthenium complexes such as [(p-cymene)RuC12]2 and $(\eta.5-Ph4C4CO)2H(\mu-H)(CO)4Ru2$, and enzymatic dynamic kinetic resolution in combination with ruthenium-catalyzed racemization of the substrate. D3 discloses Ru phosphonate complexes with a covalent bond between Ru and pentavalent phosphorus. D4 discloses ruthenium carbonyl complex [Ru4(CO)8C50Me2(NEt2)2]2, containing a cyclopentadienone with head-to-tail coupling.

INTERNATIONAL PRE INARY EXAMINATION REPORT

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of:

Box V.

The subject matter of the present application differs from the disclosure of D1 to D4 mainly in that the present application provides aminocyclopentadienyl ruthenium complexes which can racemize a chiral secondary alcohol rapidly at room temperature in the absence of a hydrogen-transfer agent. Although D2 discloses ruthenium complexes useful as a racemization catalyst, the complexes of D2 do not have the amino group bonded to cyclopentadienyl ligands and need hydrogen mediators for the racemization. D1 and D4 disclose aminocyclopentadienyl ruthenium omplexes, but neither of the documents D1 and D4 teach or fairly suggest such aminocyclopentandienyl ruthenium complexes which can racemize a chiral secondary alcohol rapidly at room temperature in the absence of a hydrogentransfer agent as disclosed in the present application. Accordingly, it cannot be considered obvious to a person skilled in the art to configure such aminocyclopentandienyl ruthenium complexes as disclosed in the present application in order to solve the problem posed, with knowledge of the cited documents.

Therefore, the subject matter of the present invention are considered to meet the requirements of Article 33(2) and 33(3) PCT.
